23 Julyo Between 0610 and 1900, Il-10s made individual flights at an altitude of about 350 motors in the vicinity of the field ore made crosscountry flights heading toward Henon. Between 0610 and 1900, 4 Po-2s made local flights. 26 July, Between 0750 and 1780, individual flights were made. At about 1100, Il-10s assembled in the formations at an altitude of about 400 meters after having been aloft individually for about 10 minutes. These formations consisted of mine and six Il-10s respectively. The formation of mine planes consisted of three flights in wedge fernation; the fernation of six planes consisted of two flights in wedge formation, of which the left flight flew to the front. The distance and interval between the individual flights was about 60 meters. The individual planes of each flight flow at a distance of about 20 meters and an interval of about 30 meters. After a flight time of about 10 minutes the formation dispersed and the individual Il-10s made low-level attacks on the hangars in the southern parties of the field. The Il-10s which practiced individually flying without assembling in formations made also lew-level attacks at the hangars mentioned. The same attacks were observed as on 12 July. All II-10s had yellow markings on their tail units and propeller hubs. 27 Julys Between 0700 and 1600, several Pe-2s made local flights. At about 0730 ene Li-2 landed coming from the direction of Brandon burg. At 1150, the Li-2 took off again heading toward Brandenburg. 28 July. Il-10s made individual flights in the vicinity of the airfield during the morning and afternoon. At 0620, one Il-10 took off and headed toward Ketsin. Throughout the entire day, several Po-2s made local flights. Between 2100 and 0100, there was night air activity by Pe-2s. A tetal of 24 individual take-offs were counted. The aircraft had set position lights and made local flights at an altitude of about 120 meters. Up to 5 Pe-2s were seen aloft at the same time. Buring might air activity, the runway was marked by a flare path, 50 to 60 meters wide, leading from west to east. The red lamps were erected at a distance of about 50 meters on both sides of the runway. A searchlight was located at the western side of the airfield at the forks of Michemes read. This searchlight illuminated the runway only during take-offs and landings. 5 August. The fellowing Il-10s, which came from the direction of Falkensee, landed at the airfield and were parked at the southern portion of the field:

At 1150 At 1150 At 1210 At 1225 At 1400 10 Il-10s 9 Il-10s 9 Il-10s 10 Il-10s 10 Il-10s

At about 1520, two MiG-15s made low-level attacks at the field coming from an easterly direction.

2. Prior to 4 August, 36 Il-10s were lined up in front of the unleading track at the northwestern side of Desberits mirfield. The planes were parked in two curved lines of 18 mircraft each with their nesss pointing to each other. Seven Il-10s were parked in one line abreast at the morthern side of the field parallel to Hamburger Chaussee. On 5 August, all of these mircraft except the 48 Il-10s which had arrived on interest day were still parked in the same areas. It was noted that the number of swept back jet mircraft, which were setting on jacks in front of the hangars varied from day to day, in particular:

17 July, 3 jet planes

23 July, 8 jet planes

24 and 25 July, 3 jet planes

26 July, 8 jet planes

27 July to 5 August, 3 jet planes

The following aircraft were observed in the languars at the southern pertion of the airfield:

10 Pe-2s

2 Yak-14s
8 jet aircraft including these jacked up in front of the hangars.
Four searchlights with aggregates, and I two-barreled AA gun, presumably a model 1941 25-mm AA gun, were seen in the hangars at the southern airfield pertion.²

black-bordered epaulets with air force insignia. 4. No changes in the occupation were observed at Hindenburg Kaserne during the period of observations. At about 1030 on 17 July, two companies with a strength of 250 men semmanded by about 12 air force officers marched toward Buchow-Karpsow. The personnel, almost all of whom were young recruits, were steel helmets

during the period under observation, about 280 to 300 recruits were employed in firing practices and received infantry basic training at the northern side of the airfield near Hamburger haussee. The recruits came from Bichthofen Kaserne. Training personnel and recruits were

25X1 5. Between 12 and 19 July, 2-axle trucks were observed meving to and from the Kaserne. All trucks were 25X1 newly mamufactured and of Soviet make.

25X1 6. The following air activity and aircraft were observed at Doeberitz airfield: Prior to late July, air activity was rather small. Mainly local flights were made by individual I1-10s and Po-2s. Since about 1 August, air activity was intensified. Flying was practiced in formations of 3, 4, 6, 8, and 12 aircraft. The formations consisted of individual flights which flew in tandem formation or side by side. Takeeffs and landings were made individually in rapid succession. The aircraft assembled in formations shortly after take-off. The aircraft taking off first circled the field until the last aircraft had joined up and the formation formed. The formations also made local flights lasting for about 20 minutes and landed again. Firing practices at sleeve targets and ground targets at the firing range south of Hamburger Chaussee were observed on several days. The sleeve target was observed about 100 meters behind the towing aircraft. Ne details sould be observed because of the distance. Two to three aircraft simultaneously attacked targets. When firing at ground targets, the individual II-10s deve straight down fired on the targets and pulled back up. There was a total of 50 Il-10s parked on the eastern and northern sides of the field, and in the aircraft revetments. Six fighter aircraft, prebably MiG-15s, and two twin jet aircraft of an unidentified type, were seen at the southern portion of the field. It was learned from soldiers of the ground attack regiment, that this

regiment will probably be transferred from Desberitz to an undetermined

- 7. The two test stands at the airfield were almost continuously in daily eperation. Several searchlights were generally in operation during the evening. We ecoperation with aircust was observed.

 Almost daily since about 1 August, 3 to 4 railroad tank cars arrived at the airfield. Emptying procedures were not observed.

 On 6 August, about 20 large crates, measuring about 2 x 2 x 2 meters, were loaded by a crane on railroad cars at the spur track. No information on the content of the crates could be obtained. The departure of the train was not observed.
- 8. The occupation of Richthofen Kaserne remained unchanged during the period under review. Prior to late July, details of about 250 men each were employed in maintenance work on searchlights and radio trucks at repair shops on the airfield. It was further observed, that there was quite a bit of spert activity in addition to intensive cleaning and removation work. German painters, were also employed there and had to work overtime. Seviet soldiers repeatedly stated, that they were expecting an inspection but this imspection was not held during the period under review. Since early August, this intensive cleaning has tapered off. It was believed that instruction courses and mechanical training had been terminated. Since I August, it was observed that about 500 men with field packs, earbines, gueksacks, and relled blankets mest daily marched to the training grounds south of Hamburger Chamssee. Other personnel were often seem moving to the airfield area while the remaining soldiers were engaged in athletics at the kaserme area,
- 9. On 21 July, it was observed at NSKK-Kaserme that intensive cleaning and painting work was being done. It appeared as though the units stationed at this kaserme were also making preparations for an inspection. Since 1 August, about 500 soldiers with field packs daily marched to the training grounds south of Hamburger Chaussee, while another 200 men without field packs moved to the airfield.
- 10. The ground attack regiment had a strength of about 525 mem. About 50 percent of these men were quartered in Richthofen Kaserne while the other 50 percent were quartered in NSKK-Kaserne. Of the 525 mem, about 70 were pilots.

•				

12. The fellowing air activity and aircraft were observed at Doeberitz
airfield:

18 July. At about 1045, about 30 II-los were parked outside of the revetments on the morthern edge of the airfield. No other observations ended be made because of restricted visibility.

21 July. Formation flights by 10 II-los were observed.

25 July. At about 1800, 9 II-los flying in flight formation crossed over the airfield at an altitude of about 300 meters.
